**To**

**The President of the UNITED STATES of AMERICA**

Mr. Joseph R Biden

The White House

1600 Pennsylvania Avenue, N.W.

Washington, DC 20500

**Subject: US national development, security, freedom, global crises, sustainability of civilian governments and human civilization beyond the 21<sup>st</sup> century**

**Dear Mr. President,**

My name is Dr. Suresh Kumar Maran. I am a scientist, engineer and author. I do advanced research on the foundations of social sciences and physical sciences. I have a Ph. D from the University of Pittsburgh, USA, in the field of quantum gravity. My research works cover all advanced areas in technology, advanced physics, and modeling social and economic phenomena. I recently finished writing my book "The Emotional and Relational Foundations of Human Advancement", which I believe is a mission of critical importance to solving the major problems the US is involved in, maintaining democracy in the US, and around the world. I have been prototyping a platform called UNITESERVE for global economic management and transformation and addressing national and global issues. I am writing this letter to explain the critical importance of these for addressing US national development, solving various global problems, ensuring the existence of civilian governments, and ensuring the survival of human civilization beyond the 21<sup>st</sup> century.

I have done extensive research work (30years) on the foundations of both physical sciences and social sciences, which is essential to understand the holistic picture of what is going on in the world. This is a summary report to you what I have discovered, and offer solutions and plans for the future, and request to be shared with all the states of the union. This letter is brief, references are provided in

the end for detailed information, and contact information is given for further discussion. All the documents relating to this letter will be made public soon or will be provided on request.

The United States leads the world in technology and economic development. But I believe the problems that are critical to the US are relational in nature, internally and externally. The United States has been battling numerous problems right from the beginning of its creation. To maintain freedom in the world, and racial equality. The US has fought many wars and so much blood has been shed in this regard. For the United States leading the world in technology, the foundations laid by physical sciences by scientists in the west and around the world have helped in this regard. But to solve relationship problems and lead the world relationally the United States needs a scientific understanding of human relationship phenomena.

I was doing my Ph.D. in advanced physics at the University of Pittsburgh, Pennsylvania, between 1999 and 2007. Because of September 11 attack on New York, all the blood of US troops shed to fight against extremism, and the death of Iraqi and Afghanistan people, I was quite tormented by it. Also, the economic downturns that occurred around 2005, etc., have deeply affected the world. So, I changed the field from physics to the study of foundations of social sciences, which is the field that deals with all these. Fortunately, the US has invested a lot in behavioral sciences such as neuroscience, which was quite helpful in my research. Also using the experience from people behavior from the US from all over the world and from my knowledge of behavior from a diverse cultural background in India, over 15 years of hard work I have put together the book 'The Emotional and Relational Foundations of Human Advancement'. I believe this will help the US solve many of the problems in its economic advancement, solving internal issues such as gun violence, improving the toxic political climate in the USA, racial equality, addressing poverty, maintaining freedom, building national unity, solving many of the global issues.

I like to put many of the issues the US has been suffering globally right from its inception, and in proper context. All the way from the industrial revolution, education has been focused on technical training and competition. Maintaining relationship skills was not the focus of education. So, while the world has been evolving technologically, but relationships were deteriorating, with numerous wars, with extreme groups rising in Europe and other parts of the world, in the last century, leading to world wars I and II. Families also have weakened. So, the imbalance between the advancement of technology, and lagging in relationships is what created the problems. If the US wants to be a world leader in global economic development and maintain freedom, peace, and prosperity, it needs to address this imbalance. This is where my research work comes in.

Now while the world is politically relatively stable but is suffering from numerous crises: "Pandemic, inflation, inequality, global warming". Again, my research indicates this imbalance between relational and technological advancement, is again the reason for this. My research indicates the long-term trend of this imbalance is a threat to the existence of civilian governments, because of the emergence of hyper-extremism or high-tech fascism in the future. I am afraid if we don't address this it will have catastrophic consequences for human civilization in long term. In my paper "Analyses of global crises, Highly Adverse long-term trend, and Prevention", I analyzed this, given reference [3A].

Currently, the world has relationship issues in every aspect of life: political, economic inequality, family instability, child abuse, violence, etc. As technology advances, it increases the risk of the destructive potential of technology, development of lethal technology, and abuse of technology. No law or rule banning the development of lethal technologies can prevent it. If there is a will there is a way. The only way this can be avoided is if humanity advances relationally, there are smooth and intelligent relationships at every level of society, and every aspect of society. Bringing this requires an extensive change to education and the basic philosophy of human life.

My bookset “The Emotional and Relational Foundations of Human advancement” precisely aims to fix the imbalance. It lays systematic foundations to understand human emotional and relational behavior both at the individual, national, and international level, and help manage relationships. The bookset gives a systematic description of the interconnection between emotions, relational phenomena, and the advancement of human life from the individual to nations to the whole human race. It gives detailed insight into how emotions and relations influence politics, economics, people diversity, history, science, cultural differences, etc. It also explains how all these influence each other. The book is currently available in Amazon Kindle as an ebook. Detailed information is available in reference[2].

To fulfill the goal of US leadership in the world, the US needs to use my book to bring relational advancement in the US and in the world, to bring a balance between technology and relationships.

I have been prototyping a platform called UNITESERVE to address various global issues, pronounced as unite+serve. It is a platform to combine the balance of technology and relationship expertise to address the various global crises, help global economic advancement, and ensure the safety of the future of human and civilian governments. UNITESERVE project aims to address these issues in one package, and the proposal and all detailed information are given in the references in the end. The prototype is currently online at [www.uniteserve.com](http://www.uniteserve.com).

UNITESERVE is an advanced global relational feedback system that is designed to stabilize and advance global economic activity. It is designed to foresee the future trends in global human activity both good and bad events, using data science and research. Its function is to help governments and organizations steer the world away from future crises and steer it towards a stable and sustainable future. I have been prototyping this platform for the last seven years, it aims to combine technological and relational solutions to solve world problems. The proposal for this platform is available in reference [5]. The documents needed for its operation will be made public soon. It is highly extensive and involved, so I would request you to appoint dedicated personal to investigate this proposal. All the documents relating to this platform given in the references [4] and [5] will be made public soon or will be provided on request.

The world is under a lot of stress at many levels: inflation, aftereffects of the pandemic, resource constraints, pollution, stock market volatility, global warming effects, risk of advanced technology, etc. All these crises could join and amplify each other to sink the human civilization itself in the future. This UNITESERVE platform is essential to properly steer the world and must be fully implemented as fast as possible, within a decade, to maintain global economic stability and sustainability. For information, please read my paper on crisis [3A] and the proposal [5A].

I believe the imbalance between relationships and technological advancement must be addressed and fixed within the next 15 years. If not, I believe the world may face a severe threat to the existence of civilian governments, through hyper extremist events and the rise of high-tech fascism that potentially could convert the world into hell-like conditions. So, I would like the US government to act as fast as possible.

Following is the help I need as soon as possible to go ahead with various operations:

1. I would like to address the US Congress to explain the imbalance between relationship and technology, deeper analysis of it, and why and how nations should address it. I would like the Congress to understand where the origin of political and cultural differences in nations in the world come from, which often leads the US in conflict with nations around the world. I think this would help address many of the issues that the US is facing with the rest of the world.
2. Currently, education in the US and around the world is focused on 'competition' and 'technology'. This will only lead to high-tech fascism compromising civilian governments, democracy, and possibly leading to the collapse of civilization. The focus on education must be changed to relationship-centric, with the proper mix of relational and technical skills. US universities not only train the professionals in the US but also those from around the world. So, the US must lead the way to change education. All the necessary foundations are laid in my book. I have written a separate paper regarding the issue of education by the title 'The global emergency to change education to save the civilization', and also given in the references [3D].
3. Support to create a team and conduct relational campaigns around the world. I think this is the best way to solve problems with the rest of the world and prevent the bloodshedding of US troops. The US has a history of war both internally and externally, and I don't believe the life and blood of American soldiers should be used as pons in fixing issues in other countries. I believe trillions of the money spent on war could be used to help the families of troops, homeless communities, and help address poverty in the US.
4. Funding for a) Review, revision, and promotion of my book in the US and around the world b) Create a team to study the US in detail to understand how political, economic, cultural, and educational aspects of states are interacting with each other to help understand future economic possibilities, improving relationships within it, future crises, and solving many of the current problems faced by US, c) Study of interaction of US with the rest of the world d) conversion of my book into a textbook format to help educate students in emotional and relational foundations for personal and national advancement.
5. An analysis, consultation, and collaboration on creating the UNITESERVE platform. I have incorporated UNITESERVE Inc. in Delaware for this purpose. Funding assistance to set up an office in New York and create a management team is required. This is a quite advanced organization that plans to predict and solve future crises using data science, foundations in my book, and an integrated global relational feedback system. I believe it needs to be first strategically implemented in the US, Europe, and India and expanded further. The

UNITESERVE platform is quite powerful it needs legal review for checks and balances and requires global collaboration to get implemented. I need the US govt to assist in this regard.

6. Startup fund to establish a US base of the UNITESERVE platform. The fund will be used to establish offices in top US Cities, create a management team to manage activities. Creation of career infrastructure, to train experts both in relational and technical skills for the foundational activities of the project such as research, the transformation of educational systems, etc. The project component of the platform can be used to conduct various projects of national and global interests, and train young students in a career with both relationship skills, and science and technology, particularly in the poor regions in the USA. The research platform will be used to collect anonymous data from various services, research, provide info for government and organizations, to help in planning for the future economic possibilities and avoiding crises.
7. I would be grateful if the US govt pays the expenses that accrued in researching for about 23 years, all the way from the time I enrolled in the US at the University of Pittsburgh, which is about 50K\$, which now stands as US credit card loans and support offered by my brother from his postdoctoral fellowship in the US.

Please know I applied to Harvard, Caltech, and MIT(USA) around the year 2000 to do research both in foundations of physics and human behavior. But it got rejected. So, I did everything by myself. While the US spent at least 4trillion on war, I couldn't get the money required (100k) to conduct my research, which could have helped the US save the trillions, and lives of the US soldiers in the process. Even if I got enrolled in a university, there is no possibility of doing the research I conducted in any university anywhere in the world. Universities have become bubble-like environments, and it is difficult to be objective. All the data must come from real-life experiences, over a course of a long time for research.

I strongly believe the research I have conducted is essential for maintaining democracy in the US, freedom in the world, advancing and sustaining human civilization.

Please know that writing this book and all the related work cost 15 years of my life, and I almost died in the process, have undergone extensive trauma trying to research and gather all the information. I had no choice because not doing it will have catastrophic consequences on the future of civilization. The US has trained me well to become a scientist and, I have used the skill to work on the most important aspect for the survival of the USA. No longer I can proceed without help, and please support me with the list of requests I made. It has to be implemented as rapidly as possible at least within 15 years, as multiple crises are coming in the future. So, request immediate financial assistance to move to a secure place, continue my research, conduct a global relational campaign, and investigate and launch the UNITESERVE platform.

Respectfully,

Dr. Suresh K Maran Ph.D
